

What is Micropigmentation?

Micropigmentation is a revolutionary breakthrough procedure designed to offer a more “permanent” cosmetic option for ladies and gentleman who want a more filled in look to their brow, lip area, and also upper and/ or lower eyeliner. This procedure has been redeveloped in a “feathering” technique that is now more realistic than before.

These services involve a much more thorough in-take process to ensure a client is valid for the these procedure(s) through proper questioning, paper work, and consulting with a physician prior if necessary.

Generally, 2-3 visits are needed to complete the eyebrow procedure depending on needs of client, with routine maintenance needed every 12-18 months or so.

Eyeliner can be completed in 1-2 Sessions depending on needs and desires of client.

2-2.5 hours for procedure for eyebrow including numbing

2 hours for procedure for eyeliner including numbing
